		This Infection caused Michaelmas Terme to be kept at Reading.	

Astro-

Aſtronomicall Calculations, for this preſent yeare. 1632.

The true precellion of the Equinoctiall, or rather the true diſtance of the firſt Starre of Aries from it (moued according to the ſucceſſion of the Signes) according to Tycho Brahe, and Kepler, is 28. deg. 3. min. and 21. ſeconds.

The greateſt obliquity of the Zodiacke according to Tycho Brahe, is 23. deg. 31. min. and 30. ſeconds. But Kepler (making the Sunnes greateſt Paralaxe to be leſſer by two third parts then the Ancients and Tycho ſuppoſed it,) would haue the obliquity leſſe by a minute, viz. 23. deg. 30. min. and 30. ſeconds.

The Eccentricity of the Sunne vſed by Kepler, in his Rudolphine Tables, is 3600. parts, the totall Sine being 100000.

The Auges of the Planets according to the Rudolphine Tables, January, 1. 1632.

	Deg.	Min.	ſec.	
♄	26	36	42	♐
♃	7	16	24	♏
♂	29	34	29	♌
☉	6	15	59	♋
♀	1	54	41	♍
☿	13	43	57	♐
☽	21	5	34	♉

The place of the Moones Node aſcendent, called the Head of the Dragon, ☊. January, 1. 1632. 12. 16. 56. ♉.

Of the foure Quarters of the yeare, and firſt of Winter.

The Winter quarter tooke its beginning, vpon the 11. day of December, in the yeare, 1631. at 11. of the clocke and a halfe at night, at which time the Sunne entred in the Tropicall ſine of Capricorne, making our ſhorteſt Day and longeſt Night in the yeare.

The nature of this Quarter is cold and moyſt, and therefore it is fitly reſembled to the firſt declining Age, to Flegme, to Water, and to the Weſt Winde.

Of

Of the Spring.

The Spring taketh its beginning vpon the eleuenth day of March, at 11. of the clocke and 28 min. at night, at which time the Sunne entreth into the Equinoctiall signe Aries, making equall day and night throughout the whole world.

The nature of this quarter is hot and moyst, and therefore resembled well to youth, to Blood, to the Aire, and to the South winde.

Of the Summer.

The Summer taketh beginning vpon the 11. day of Iune at 3. of the clocke, and 22. min. in the morning; the sunne then entring into the other Tropicall signe Cancer, and making our longest day and shortest night in the whole yeare.

The nature of this quarter is hot and dry, and therefore it is resembled to Infancie, to Choler, to the Fire, and to the East winde.

Of the Autumne.

AVtumne or Harvest quarter begins this yeare, vpon the 12. day of September at 6. of the clocke and 22. min: at night; the sunne then enting into the other Equinoctiall signe Libra, and making once againe the dayes and nights equall throughout the whole world

The Nature of this quarter is cold and dry, and therefore not vnfitly resembled to Old age, to Melancholie, to the earth, and to the North winde.

Poma dat Autumnus, formosa est messibus æstus,
Ver præbet Flores, igne levatur Hyems. Ovid.

Eclipses, 1632.

THere will be presented to the view of the Inhabitants of the Earth this yeare, foure Eclipses; two of the Sun and two of the Moone; and yet but one of them will be seene in our Horizon.

The

The first Eclipse will be of the Sunne, happning vpon the 9. day of Aprill; which considered in generall for the whole earth where it shall be seene, will be limited, for the time with vs at London, in this manner following:

The beginning at, 7 houres, 9 minutes, — } in the fore-
The middle, at 9 houres, 54. minutes, — } noone.
The end of the Eclipse, at 39 min. — after high noone.

The whole continuance of the Eclipse for all parts of the earth where the Sunne shall bee seene either totally or partlie eclipsed, will bee 5. houres, and an halfe.

The whole continuance of the totall Eclipse, for all the parts of the earth, where the sunne shall bee totally eclipsed, shall bee 2 houres and 51. minutes. In the middle of the Eclipse; the sunne will bee in the 29. deg. and 50 min. of Aries, and the Moone in the 29. deg and 50. min: of the same signe, both neere the Moones Node ascendent, commonly called the Dragons head, then being in the 7. deg: and 3. min: of Taurus.

This Eclipse shall not in any part be seene of vs, because the Moone hath South latitude, causing an eclipse of the Sunne in the Southerne parts of the world beyond the Equinoctiall line, where, about the Cape of Good Hope and other parts adioyning, our Trauellers to the East Indies, shall see the Sunne totally eclipsed.

The second Eclipse will be of the Moone, happning vpon the 24. day of Aprill.

The beginning at ten a clocke and 50. min. in the forenoone.
The middle at 14. min. after high noone
The end at one a clocke and 38. min in the after noone.
The continuance from the beginning to the end will bee two houres and 48. minutes.
The digits or parts eclipsed will be 7. and an halfe.

This eclipse will not be seene of vs because it will happen in our day time, but our Antipodes will see it all; and in a word, wheresoeuer the Sunne shall be set at that time, there it shall be seene in part or in whole.

The

The third Eclipse will be of the Sunne, happening vpon the third day of October.

The beginning, at 6. houres 5. minutes
The middle at 8. houres, 34. minutes
The end of the Eclipse, at 11. houres 3. min. } at night.
according to our time here at London.

The whole continuance of this Eclipse for all parts of the earth, where the Sun shall be seene totally or partly Eclipsed, will be 4. houres and 58. minutes.

The continuance of the totall Eclipse, for all the parts of the earth where the Sun shall be totally eclipsed, will be 2. houres and 47. min.

This Eclipse wil not be seene of vs, because the Sunne will be then set: but in almost all the North America, it wil be seene either in whole or in part: in many places whereof it will be seene a very fearefull totall Eclipse.

The 4. and last Eclipse, is that which onely will be seene by vs, will be of the Moone, hapning on the 17. day of October.

The beginning at 9. of the clocke and 51. minut. at night.

The end, 40. minutes after midnight.

The Continuance from the beginning to the end, will be two houres and 49. minutes.

The Digits or parts eclipsed will be 6, and 9. min.

A Declaration of the 4. 5. and 6. *Columes* of the Almanacke.

IN the fourth, fift, and sixt Columes of mine Almanacke you haue the Place of the Sunne. The Longitude of the Moone. And the Latitude of the Moone (as may appeare by their seuerall titles) all diligently calculated by mee, (for the benefit of Sea men and others that may haue vse of them) out of the Rudolphine Tables, of that most learned and Iudicious Mathematician, Iohannes Keplerus; with what paines the Skilfull can iudge.

The manner of finding any of which three, is all one, with

with that which is vſed in all Ephemerides. For here you haue the motions for euery day of the yeare at noone according to the equall time, (which differs not much from the Apparent time) and by conuement parts proportionall, they may bee had for any other houre of the day. The way I intend not to ſhew, as being ſuperfluous to thoſe that can make vſe of them; only I will ſpeake a word or two of the Moones Latitude, becauſe it is not common.

You ſhall know therefore that the Moone by her Latitude departeth from the middle of the Zodiacke, called the Eclipticke line, either towards the North; and then is ſhee ſayd to haue North Latitude: or elſe towards the South; and then ſhee is ſayd to haue South Latitude.

North Latitude ſhe hath about the one halfe of her courſe, viz. all the time that ſhe moueth from her Node aſcendent (cõmonly called the Dragons Head) vntill ſhe come to be ioyned with her Node Deſcendent (called the Dragons tayle) after which ſhee hath South Latitude the other halfe of her courſe, vntill ſhee returne to the Dragons head againe.

Her North Latitude, in the firſt columne of mine Almanacke is marked with the letter, N.

Her South Latitude, is marked with the letter, S.

So that where you ſee one of theſe letters to bee ſet, there the latitude of the kinde noted by it doth begin; and continueth of that kinde vntill the other of theſe letters bee ſet downe.

And you are to obſerue that where either of theſe Latitudes doth begin (marked with the ſayd letters) there it doth increaſe for 6, or 7. dayes together; and this is called Latitude aſcending, either North Latitude aſcending, or South Latitude aſcending, according as it is marked with N, or S.

But when the Moone is come to her greateſt Latitude which ſhee can haue at that time; then her Latitude doth decreaſe: and this is called Latitude Deſcendent, either North Deſcendent, or South Deſcendent: and this, where it begins, is marked with the letter D.
